| 03.891.000 | set of brackets, galvanised and powder-coated in RAL 9010, colour: white       |
| 03.892.000 | set of brackets, galvanised and powder-coated in RAL 6012, colour: green       |

### 1 CONICAL POST, FIXED

A barrier post made of steel tubing with a diameter of 133/90x3 mm. This series of barrier posts are fitted with a rounded steel top made of a single piece of flat steel with ring. Overall, it is therefore a sturdy barrier post with an attractively finished rounded "Bowler" top.

Usable in virtually any environment and for many purposes. We produce these barrier posts in large quantities, making the price particularly attractive.

Unlike so many imitations, these conical barrier posts are not made of welded steel plate; a special system is used to heat and regenerate the seamless tubing. The result is a much stronger post without a weld seam.

### 2 BRACKETS FOR MOUNTING

To fix a chain we offer 2 brackets that go around the tube. Where the brackets come together a bolt is applied to fix the brackets and the chain (see photo 2).

**NB.** Also available with ground anchor plate or welded base plate.

By having the post powder coated, you can lend additional appeal to the posts.
