

Manual Window Opening System

- Manual remote opening systems can enable a number of high level windows to be operated from one single operator.
- The chain opens the window via a rotary control handle, which drives a steel helical cable. The cable runs within a nylon lined steel conduit.
- The conduit can be formed and installed on-site to overcome any difficult building contours.
-

Features

- Unobtrusive, reliable opening mechanisms
- Provides control for individual or multiple openings
- Opening lengths of up to 250mm
- Applicable to many window types
- Quick and versatile on-site installation

Key Elements

Every system has to be provided with the following components:

- **Control operator:** flat, mini, simple, concealed and geared operator
- **Opening mechanism:** chain openers, forks and locking openers for bottom hinged windows
- **Transmission elements:** cable, conduit, connectors, saddles, lock springs, end plugs

CUSTOM SOLUTIONS

We offer custom design solutions to meet your every needs
